Certified Asphalt Liquid Suppliers
per ODOT Supplemental Specification 1032

Below is a listing of certified asphalt material producers and products as of **April 13, 2012**. These asphalt material producers have complied with all requirements of Supplemental Specification 1032 and are allowed to ship to Ohio DOT administered projects.

To become a certified producer contact the Office of Materials Management Asphalt Materials section at 614-275-1380.

Note to non-ODOT agencies and producers desiring certification for non-ODOT purposes: ODOT occasionally receives requests because local agencies require ODOT certified products. ODOT will try to honor these requests as time allows because suppliers can also supply to ODOT when desired. However, ODOT is NOT obligated to rush it's certification process as outlined below as we are short on staff and time especially during the construction season. Plan on several months minimum to obtain certification during the season.

Read Supplemental Specification 1032 for full details on the certification process. To become certified ODOT will pull a series of 5 samples at it's discretion from tanks or other sources for testing and approval. These 5 samples will not be from the same tank, source or batch. Therefore, generally the process takes from several weeks to several months. All 5 samples must pass to become certified. Other criteria apply as well.
