Question Number: 2

Regarding the 4" sched. 40 Multicell Jacked or Drilled, I understand that it is to be bored under ramps, as per plan sheet 3/12. My question is, can it be bored in areas behind guardrail where the slope is so steep that any trenching would result in the loss of all excavated material down the slope, making restoration nearly impossible.

**Boring in these area are acceptable if needed. The additional cost for the boring will be the responsibility of the contractor.**

Question Number: 3

Ref.#4 - Lighting Misc.: 24 Strand Single Mode Fiber Optic Cable is to be installed between sta. 836+00 @ Hamilton Ave. and sta. 1079+50 @ SR4.

Is this cable to be terminated at either end, and if so, how and to what device?

**At Sta 836+00 you run to a pull box and leave. This end will be spliced and continued by a separate contract. At Sta 1079+50 you are splicing into existing Fiber at pull box.**

All prospective bidders, subcontractors, suppliers, materialmen and all others who have an interest in these prebid questions and answers are advised that these items are being provided for informational purposes only and are not part of the bidding documents. If a question warrants a clarification, the Department will issue an addenda addressing the request for clarification to all plan holders. If the Department believes that the bidding documents adequately address the request, the contractor will be advised accordingly.
