## Prebid Questions

Project No. 060341

Sale Date - 7/12/2006

Question Submitted: 6/16/2006

Question Number: 1

The 421 specification allows the contractor to use truck-mounted machines on project segments of less than 15,500 square yards. This project on SR 47 is divided by nine intersections, a bridge and a set of railroad tracks making the largest single lane segment something less than 9,000 square yards at most. Given this, the specification therefore allows truck-mounted equipment to be used to perform the microsurfacing on this particular project. Please confirm this.

**The intersections are not allowed to be skipped (no segments), so no truck mounted equipment will be allowed as this will be a continuous operation except for the railroad crossing and concrete bridge deck.**

All prospective bidders, subcontractors, suppliers, materialmen and all others who have an interest in these prebid questions and answers are advised that these items are being provided for informational purposes only and are not part of the bidding documents. If a question warrants a clarification, the Department will issue an addenda addressing the request for clarification to all plan holders. If the Department believes that the bidding documents adequately address the request, the contractor will be advised accordingly.
