I am looking for more information as to where the department intends the rumble strip are to be installed. The current plans are ambiguous in this regard and suggest obtaining a copy of previous construction plans. How may I obtain a copy of the original construction plans and subsequent widening and improvement from ODOT?

The section of roadway for the 1306 bridge structure has rumble strips the whole length of the project. The rumble strip quantity is intended to be used to pay for what rumble strips that are to be removed during the MOT operation.
