

SGE Revisions: July 13, 2007

The July, 2007 quarterly update for the SGE is complete. The changes to the body of text and appendices are summarized as follows:

1. Section 302.1 - made note of the fact that all reference to blow counts for determination of boring depth, refers to N60
2. Section 302.5.2 - revised the culvert boring requirement to include a two borings drilled to 20 feet below the culvert invert for pipe culverts and box culverts with spans less than 10 feet and no embankment borings planned, for example, for a culvert replacement.
3. Section 404.2 - changed hammer calibration requirement to once every two years and after hammer system repair.
4. Section 404.3 - directed that refusal blow counts do not need to be corrected.
5. Section 605.4 - Made note not to describe weathering of coal, fireclay, underclay
6. Section 702.6.3.i - changed language from "exceeding" (25% and 19%) to "greater than or equal to"
7. Section 703.1 - direction to report scour data (diameter) in metric units.
8. Appendix D, "Soil and Rock Symbology" chart - direction is given not to use weathered hatch for coal, fireclay, or underclay.
