1. For sign attachment assemblies to be furnished with this support, construction details, and location of handholes, see Standard Construction Drawings (SCD) TC-22.10 and TC-22.20.

2. For foundation details, see SCD TC-21.10.

3. Use nominal 2" schedule 40 pipe for bracing members in the truss. One internal diagonal is required at each end of each section.

4. Camber the truss a minimum of 1" for a span of 50' or less. Increase the camber 1/4" for each 5' of span over 50'.

5. Internal diagonals only may be relocated from the indicated position to avoid weld joint overlap.
