NOTES:

1. Rumble Stripes are defined as milled rumble strips with pavement markings applied in the same location such that the pavement marking material conforms to the grooved contours of the milled rumble stripe.

2. Width of shoulder should be 2' or more and less than 6'.

3. Creating a Rumble Stripe is a two-step process.
   a) Step 1: Install the milled rumble strips.
      1. Use a 60' installation cycle consisting of 48' of rumble strip followed by a 12' gap without a rumble strip.
   b) Step 2: Apply appropriate final pavement markings in accordance with C&MS Item 641:
      i.) Preformed pavement markings (C&MS Items 645 and 647) shall not be used.
      ii.) Thermoplastic (C&MS Item 644) should not be used.

4. Milled rumble strips shall be paid for in accordance with C&MS Item 643.

5. Location of the construction joint shall be verified in the field.

6. This drawing replaces TC-64.10 dated 07-17-2015.

4. Location of the construction joint shall be verified in the field.

3. Creating a Rumble Stripe is a two-step process.
   a) Step 1: Install the milled rumble strips.
      1. Use a 60' installation cycle consisting of 48' of rumble strip followed by a 12' gap without a rumble strip.
   b) Step 2: Apply appropriate final pavement markings in accordance with C&MS Item 641:
      i.) Preformed pavement markings (C&MS Items 645 and 647) shall not be used.
      ii.) Thermoplastic (C&MS Item 644) should not be used.

4. Milled rumble strips shall be paid for in accordance with C&MS Item 643.

5. Location of the construction joint shall be verified in the field.
