AASHTO	P.2.1	Properties of	2.3.34
AASHTO Commonly Recognized (CoRe)		Types and causes of deterioration	2.3.34
Elements	4.5.1	Anchorage, bearing	9.1.2
AASHTO detail categories for		Appendices, report	4.4.5
load induced fatigue	8.1.33	Appraisal Rating Items	4.2.6
Categories E and E'	8.1.33	Approach guardrail	5.5.2
Category A	8.1.31	Identification and appraisal	5.5.10
Category B	8.1.32	Inspection	5.5.15
Category B'	8.1.32	Approach roadway and	
Category C and C'	8.1.32	embankment, culvert	P.3.27
Category D	8.1.32	Approach roadway alignment	4.2.8
Category F (former)	8.1.33	Arch bridges	P.1.43
Abrasion	P.3.34	Arch bridges, steel	8.8.1
	2.2.27	Arch bridges, timber	6.1.6
Absorption	2.2.4		6.2.4
	2.2.31	Arch shaped culverts	P.3.11
Abutments	10.1.1	Design characteristics	7.5.5
Design characteristics	10.1.2	Evaluation	7.5.17
Abutment elements	10.1.14	Inspection procedures and	
Abutment types	10.1.2	locations	7.5.16
Foundation types	10.1.16	Steel reinforcement	7.5.10
Primary materials	10.1.11	Asbestos sheet packing between	
Reinforcing steel	10.1.13	metal plates	9.1.5
Inspection procedures and		Asphalt wearing surfaces	5.2.9
locations	10.1.17		5.3.8
Access	3.1.8	Asphaltic expansion joint	5.4.9
	3.5.1	At-grade casting	7.11.4
Access equipment	3.5.1	Attire, proper inspection	3.2.2
Access equipment, underwater		Axial forces	P.2.10
inspection	11.3.36		
Access, methods of	3.5.1	Backwall	10.1.14
Access vehicles	3.5.10	Balanced cantilever construction	7.11.12
Accidents, causes of	3.2.9	Barges	3.5.4
Acid etching	2.2.34	Barrel, culvert	P.3.33
Acoustic emissions testing	13.3.1	Bascule bridges	12.2.6
Acoustic wave sonic/ultrasonic		Design characteristics	12.2.6
velocity measurements	13.2.1	Multi-trunnion (Strauss) bridge	12.2.10
ADT	4.3.6	Rolling lift (Scherzer) bridge	12.2.7
	4.4.2	Simple trunnion (Chicago)	
ADTT	4.3.6	bridge	12.2.8
	4.4.2	Special elements	12.2.28
Admixture	2.2.2	Center locks	12.2.33
Aerial obstruction lighting	5.4.13	Hopkins frame	12.2.32
Aggradation	11.2.3	Racks and pinions	12.2.29
Aggregate	2.2.2	Rolling lift tread and	
Air entrainment	2.2.2	track castings	12.2.28
Alignment of deck joints	5.4.17	Tail (rear) locks	12.2.32
Allowable stress design	P.2.22	Transverse locks	12.2.34
Alternate military loading	P.2.7		
Aluminum	2.3.34		

## INDEX

	Page		Page
Trunnions and trunnion bearings	12.2.31	Deck interaction	8.5.5
Beam bridges	P.1.38	Design characteristics	8.5.2
Beams, timber	6.1.2	Evaluation	8.5.13
	6.2.2	Fatigue prone details	8.5.4
Bearing areas, timber	6.1.9	Inspection of	8.5.10
	6.2.7	Fracture critical areas	8.5.5
	6.3.7	Fracture critical members	8.5.11
Bearing surface	9.1.2	Inspection procedures and locations	8.5.6
Bearings, basic inspection		Primary and secondary members	8.5.3
procedures for	3.1.11	Braided rivers	11.1.5
Bearings, inspection and evaluation of	9.1.1	Breakaway end treatments	5.5.12
Elements of	9.1.2	Breastwall	10.1.14
Evaluation of	9.1.34	Bridge barriers	P.1.32
Inspection of	9.1.19	Bridge design loadings	P.2.1
Types and functionality	9.1.3	Bridge inspection, fundamentals of	3.1.1
Bending forces	P.2.11	Bridge inspection reporting system	4.1.1
Bending moment	P.2.11	Bridge management	4.1.12
Bent cap	10.2.13		4.4.7
Bents	P.1.52	Bridge posting	P.2.26
	10.2.1	Bridge railing	P.1.32
Bituminous wearing surfaces	5.1.6		5.5.2
Black and white fathometer	11.3.22	Identification and appraisal	5.5.9
Blast cleaning	2.2.34	Inspection	5.5.14
Boats	3.5.4	AASHTO requirements for	5.5.3
Boatswain chairs	3.5.6	Bridge response to loadings	P.2.9
Boring	13.1.4	Bridge seat	10.1.14
Bosun chairs	3.5.6	Bridge structure file	3.1.2
Box culverts	P.3.12		4.3.3
Box culverts, concrete	7.12.1	Brinell hardness test	13.3.9
Common defects	7.12.5	Brittle fracture	8.1.8
Design characteristics	7.12.2	Brittleness	P.2.20
Evaluation	7.12.10	Bronze bearing plates	9.1.5
Inspection procedures and locations	7.12.5	Bucket trucks	3.5.10
Loads on	7.12.2	Buckle plate decks	5.3.2
Steel reinforcement	7.12.4	Buckling	P.2.19
Types of	7.12.3	Buoyancy	P.2.8
Box girders, concrete	7.11.1	Burying end treatments	5.5.12
Common defects	7.11.18	Cable-stayed bridges	12.1.14
Construction methods	7.11.3	Anchorage and connections	12.1.19
Design characteristics	7.11.2	Cable arrangements and systems	12.1.14
Evaluation	7.11.33	Cable planes	12.1.16
Inspection procedures and locations	7.11.18	Vibrations	12.1.21
Primary members	7.11.5	Inspection locations and procedures	12.1.26
Steel reinforcement	7.11.5	Anchorage	12.1.35
Box girders, steel	8.5.1	Cable sheathing assembly	12.1.29
Common defects	8.5.6	Cable wrapping	12.1.28
Configurations	8.5.2	Dampers	12.1.31

## INDEX

Inspection elements	12.1.28	Chemical analysis	13.3.10
Other inspection items	12.1.36	Chemical attack	2.1.18
Recordkeeping and documentation	12.1.37	Circular culverts	P.3.10
Cable Supported bridges	P.1.44	Cleaning, tools for	3.4.3
Advanced inspection	12.1.1	Cleaning, underwater inspection	11.3.38
Common defects	12.1.37	Cleanout plugs	5.4.11
Design characteristics	12.1.22	Climbers	3.5.5
Evaluation	12.1.2	Climbing	3.5.7
Cables	12.1.38	Climbing safety	3.2.11
Caddisflies	P.1.15	Closed joints	5.4.5
Caissons	2.1.16	Closed spandrel arch	7.5.2
Cantilever pier	P.2.36	Design characteristics	7.5.2
Cantilever span	10.2.4	Evaluation	7.5.17
Carbonation	P.2.30	Inspection procedures and	
Carbon equivalent equation	13.2.11	locations	7.5.11
Carpenter ants	13.3.10	Primary members	7.5.7
Cast-in-place slab	2.1.15	Steel reinforcement	7.5.9
Common defects	7.1.1	Collision damage	2.1.21
Design characteristics	7.1.3		2.2.26
Evaluation	7.1.2	Column	10.2.13
Inspection procedures and	7.1.8	Column bent	10.2.5
locations	7.1.4		11.3.16
Steel reinforcement	7.1.2	Column pier	10.2.2
Cast iron	2.3.32	Column pier with a web wall	10.2.3
Properties of	2.3.32	Components, bridge	P.1.1
Types and causes of		Composite action	P.2.32
deterioration	2.3.34		5.2.5
Categories E and E"	8.1.33		7.9.4
Category A	8.1.31		7.10.2
Category B	8.1.32	Compression	P.2.19
Category B'	8.1.32	Compression members,	
Category C and C'	8.1.32	Axially-loaded	P.1.9
Category D	8.1.32	Compression seal	5.4.6
Cathodic protection	5.2.10	Computer programs	13.3.2
Catwalks	3.5.8	Computer tomography	13.3.5
Cellular seal	5.4.6	Conclusions, report	4.4.4
Centrifugal force	P.2.8	Concrete	2.2.1
Channel beams	7.4.1	Concrete advanced inspection	
Common defects	7.4.4	techniques	13.2.1
Design characteristics	7.4.2	Concrete arches	7.5.1
Evaluation	7.4.10	Concrete bridge coatings,	
Inspection procedures and		inspection of	2.2.35
locations	7.4.4	Areas to inspect	2.2.38
Primary and secondary members	7.4.2	Coating failures	2.2.39
Steel reinforcement	7.4.2	Concrete bridges, protective	
Channel elements	11.1.3	systems for	2.2.32
Channel types	11.1.4	Concrete coatings, types and	
Charpy impact test	13.3.9	characteristics of	2.2.32
Cheek wall	10.1.14	Epoxy paint	2.2.33

## INDEX

	Page		Page
Latex paint	2.2.32	Basic ingredients	2.2.1
Oil-based paint	2.2.32	High performance	2.2.5
Paint	2.2.32	Mechanical properties	2.2.4
Urethanes	2.2.33	Physical properties	2.2.4
Water repellent membranes	2.2.33	Concrete, reinforced	2.2.6
Concrete culverts	P.3.15	Concrete strength	13.2.11
Concrete decks	5.2.1	Concrete wearing surfaces	5.1.6
Common defects	5.2.11		5.2.8
Design characteristics	5.2.1		5.3.8
Evaluation	5.2.16	Condition, overall	3.1.6
Inspection procedures and locations	5.2.12	Condition rating items	4.2.1
Protective systems	5.2.9	Condition state assessment	4.2.6
Wearing surfaces	5.2.8	Confined spaces	3.2.17
Concrete deterioration, types and causes of	2.2.12	Condition states	4.5.9
Abrasion	2.2.27	Connections	P.1.16
Chloride contamination	2.2.24	Connections, bolted	P.1.20
Collision damage	2.2.26	Connections, pin	P.1.17
Cracking	2.2.13	Connections, pin and hanger	P.1.21
Delamination	2.2.23	Connections, riveted	P.1.18
Efflorescence	2.2.24	Connections, splice	P.1.22
Ettringite formation	2.2.24	Connections, welded	P.1.22
Honeycombs	2.2.25	Consequence of irresponsibility	1.2.5
Overload damage	2.2.27	Construction date	4.4.2
Pop-outs	2.2.25	Continuous span	P.2.29
Prestressed concrete deterioration	2.2.29	Copes	8.1.49
Reinforcing steel corrosion	2.2.28	Core sampling, concrete	13.2.11
Scaling	2.2.21	CoRe element	4.5.1
Spalling	2.2.23	Basic requirements	4.5.3
Wear	2.2.25	Development	4.5.1
Concrete, examination of	2.2.35	Identification	4.5.4
Advanced inspection techniques	2.2.37	Role of	4.5.10
Physical examination	2.2.36	Coring equipment, underwater inspection	11.3.40
Visual examination	2.2.36	Corrosion	8.1.55
Concrete girders	7.3.1	Corrosion of steel	2.3.14
Common defects	7.3.4	Corrosion sensors	13.3.2
Design characteristics	7.3.2	Corrugated pipe culverts	P.3.15
Evaluation	7.3.9	Corrugated steel flooring	5.3.2
Inspection procedures and locations	7.3.5	Coupons, steel test	13.3.9
Primary and secondary members	7.3.3	Covered bridge arches	6.1.6
Steel reinforcement	7.3.3	Covered bridges, timber	6.1.3
Concrete inspection, general principles of	3.1.13	Covers, timber	6.1.7
Concrete permeability	13.2.11	Crack initiation	8.1.7
Concrete, prestressed	2.2.9	Crack propagation	8.1.8
Concrete, properties of	2.2.3	Cracking	2.2.13
		Cracks parallel to primary stress	8.1.54
		Cracks perpendicular to primary stress	8.1.54
		Creep	P.2.18
