SECTION THRU PIER

RECOMMENDED PIER BEARING

GENERAL NOTES

LIMITATIONS: This design is intended for sites where the maximum settlement is less than 0.30. For ungrouted box girders, a bridge expansion length up to 250'-0" and a total length of 400'-0". The abutment type must be flexible (applied on a single row of bolts) regardless of pile type.

Bridge seat construction joint shall be straight between ends of backwall.

Hole locations in the structural steel are to be detailed in the project plans. Flame cutting of holes is not permitted.

SECTION M-M

(SUPPORT BOLTS NOT SHOWN)
