

SUMMARY OF FLOODPLAIN IMPACTS

Date: 04/09/19

Project ID: HAN-SR 698-4.73/5.76

Floodplain Affected: Tiderishi Creek Floodplain

Description of Project:

The Ohio Department of Transportation is proposing to replace two concrete slab bridges over Tiderishi Creek in Hancock County on State Route 698 (mile markers 4.73 and 5.76).

Why must this project be located in the Floodplain?

The project consists of existing stream crossings which are located within the floodplain. It would not be practical to reengineer the existing roadways to avoid work within the floodplain.

What alternative sites were considered, if any?

Based on the scope and purpose of the project there are no possible alternative sites to consider.

Were any mitigation measures utilized on this project? If so, please describe.

There will be no rise to the 100-yr floodplain as a result of this project; therefore, no mitigation measures are needed.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
