

SUMMARY OF FLOODPLAIN IMPACTS

Date: August 10, 2020

Project ID: DEF-US 127-0.53 (PID: 102669)

Floodplain Affected: Maumee River

Description of Project:

The Ohio Department of Transportation is proposing to replace a structurally deficient U.S. Route 127 Bridge spanning the Maumee River at mile marker 0.53.

Why must this project be located in the Floodplain?

This structure provides passage for travelers over the Maumee River and its associated floodplain.

What alternative sites were considered, if any?

Based on the scope of the project, alternative sites are not appropriate.

Were any mitigation measures utilized on this project? If so, please describe.

Fill quantities were limited in the floodplain resulting in no rise in expected floodplain elevations.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
