

## SUMMARY OF FLOODPLAIN IMPACTS

**Date:** 03/12/19

**Project ID:** WYA-SRTS Carey (PID: 106346)

**Floodplain Affected:** Spring Run

**Description of Project:**

The Safe Routes to School project in the Village of Carey proposes to construct a multi-use path for access to school from Patterson Street, new sidewalk along three streets, and improvements for four intersections, including new curb ramps, pavement markings, and signage.

**Why must this project be located in the Floodplain?**

The project is located in a floodplain because intersections and roadways requiring improvements for the SRTS project are located within the floodplain.

**What alternative sites were considered, if any?**

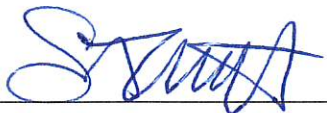

Based on the scope and purpose of the proposed project, there are no possible alternative sites to consider.

**Were any mitigation measures utilized on this project? If so, please describe.**

The described work does not change the alignment, grade, or hydraulic capacity of Spring Run; therefore, no mitigation measures are needed.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
