EXHIBIT A – TEMPLATE OF PUBLIC EXPLANATION TO BE POSTED (TO BE COMPLETED BY THE DOCUMENT PREPARER)

SUMMARY OF FLOODPLAIN IMPACTS

Date: _________________________________

Project ID: ______________________________

Floodplain Affected: ______________________________

Description of Project:

Replacement of the existing Elburn Avenue bridge over Turkey Run.
Replacement of the existing Etna Street bridge over Mason Run.

Why must this project be located in the Floodplain?

The project consists of the replacement of existing transportation infrastructure that is currently located within the floodplain. Avoidance of the floodplain is not possible.

What alternative sites were considered, if any?

No alternative sites were considered. The project consists of the replacement of existing infrastructure that is currently located within the floodplain. Abandonment of the existing stream crossings would create an undesirable disruption to the City’s roadway network.

Were any mitigation measures utilized on this project? If so, please describe.

Proposed replacement structures (bridges and culverts) were designed to avoid impacts to base flood elevations greater than 0.0 feet and comply with all applicable local, state, and federal floodplain protection standards.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
