EXHIBIT A – TEMPLATE OF PUBLIC EXPLANATION TO BE POSTED (TO BE COMPLETED BY THE DOCUMENT PREPARER)

SUMMARY OF FLOODPLAIN IMPACTS

Date: 10/3/17

Project ID: __104811____________________

Floodplain Affected: __Little Scioto________________

Description of Project: Maintenance project for two bridges and includes deck and approach slab replacement, conversion of abutment to semi-integral, deck/parapet sealing, and repair of steel piles.

Why must this project be located in the Floodplain?

It is rehab work on the existing bridges.

What alternative sites were considered, if any?

There are no alternative actions as this is a maintenance project and work is required on the existing piles and bridge decks.

Were any mitigation measures utilized on this project? If so, please describe.

Construction limits were minimized under the bridges and identified on the plan sheets to minimize disruptions to the stream banks and slopes.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
