Idea Name Practical problems with Roundabouts

ORIL FY2019 Idea 2019-A

Idea Description.

There is currently no guidelines in the OMUTCD for closing a leg of a roundabout or detouring through a roundabout. Compile schematics

The maintenance of circular intersections (roundabouts, mini-roundabouts, traffic circles) poses a new set of problems: Where do you park your equipment for fixing a sign, where do you park your equipment when mowing, where do you park a vactor truck when working on a BMP structure in a circular intersection.

Corporation limits, maintenance borders, and county lines are all lines. Roundabouts/circular intersections complicate jurisdictional lines (which are already complicated). Ohio being a "home rule" city makes this even more problematic. Create a list of strategies to overcome this institutional issue.
