APPENDIX B

EXAMPLES OF OUTFALLS, NON-OUTFALLS, AND INVENTORY CHALLENGES
There are two outfall types: Ditch Outfall, Pipe Outfall

**Ditch Outfall:** An outfall located at the end point of an open drainage feature, which is most commonly a ditch, but can also include a trench, trough, channel, or other similar feature.

**Pipe Outfall:** An outfall located at the end point of a closed drainage feature, such as a pipe, culvert, or similar manufactured structure.
