Prebid Questions

Project No. 083000

Sale Date - 1/25/2008

Question Submitted: 2/21/2008

Question Number: 1

The scope of service requires converting the existing abutments to Semi-Integral Abutments. The existing abutment bearings are only 2 1/8" +/- thick. Is the department going to require the placement of the HP steel shape between the proposed bearing and bottom of the existing steel beam to accommodate a row of reinforcing steel below the existing beam as shown on STD DWG. SICD-1-96? If so, will this require lowering the beam seat to accommodate the additional depth needed for the bearing, load plate and HP spacer?

Question Submitted: 2/22/2008

Question Number: 2

I can not find a "Scope of Services" for this design build project online. Is there one available? Thank You

It has been combined with the proposal online.

All prospective bidders, subcontractors, suppliers, materialmen and all others who have an interest in these prebid questions and answers are advised that these items are being provided for informational purposes only and are not part of the bidding documents. If a question warrants a clarification, the Department will issue an addenda addressing the request for clarification to all plan holders. If the Department believes that the bidding documents adequately address the request, the contractor will be advised accordingly.
