Ohio Department of Transportation Prebid Questions

Project No. 066004 Sale Date - 3/22/2006

Question Submitted: 3/14/2006

On Plan Sheet 11 of 12 there is a detail showing rebar being used to reinforce the drill shafts. On the same page the Drilled Shaft Summary calls for W24 X 62 beams. What type of reinforcement is to be used on this retaining wall?

Question Submitted: 3/15/2006

The stationing for Meigs 124-53.85 does not match the soil profile sheets and plan and profile sheets shown on sheets 2/3 and 6/12 respectfully.

Having said this we would like to know what area the soil borings on page 2/3 are representing?

Also could you please address the river elecation at the same location mentioned above?

Question Submitted: 3/17/2006

Due to the proximity of the Ohio River to this project, approximately 20' to 30' away, we would like to request the full bore logs be sent to the bidders showing the elevation that water was hit when the bores were taken. It appears that the bores as shown by the plans, only went down 25', but the lengths of the drilled shafts range from 27.5' to as much as 45'in length. Therefore, water may still play a factor during the drilled shaft installation, please clarify if possible.

All prospective bidders, subcontractors, suppliers, materialmen and all others who have an interest in these prebid questions and answers are advised that these items are being provided for informational purposes only and are not part of the bidding documents. If a question warrants a clarification, the Department will issue an addenda addressing the request for clarification to all plan holders. If the Department believes that the bidding documents adequately address the request, the contractor will be advised accordingly.
