

SUMMARY OF FLOODPLAIN IMPACTS

Date: October 3, 2017

Project ID: MED-94-18.66 PID 90931

Floodplain Affected: Zone A, East Branch Rocky River

Description of Project: During the summer 2019, the Ohio Department of Transportation is proposing a project to rehabilitate the SR 94 bridge over the East Branch of the Rocky River. Based on the attached Flood Insurance Rate Map (FIRM), the project is located in the regulated floodplain. Attached is the FIRM showing the floodplain boundary in relation to the proposed project.

Why must this project be located in the Floodplain?

The project involves maintaining and preserving an existing functionally dependent roadway bridge.

What alternative sites were considered, if any?

Work is to an existing bridge, no other alternative sites were considered.

Were any mitigation measures utilized on this project? If so, please describe.

No. The work being performed is maintenance and not new construction. A No-Rise Certification has been made by a Registered Professional Engineer.

To the best of my knowledge, this project has complied with all applicable Local, State, and Federal Floodplain protection standards.
