Issue 14: Bicycle/Pedestrian Design Guidance

Need some support designing active transportation facilities?

You're in luck! This past month, ODOT published *Bicycle and Pedestrian Resources for Engineers*, your one-stop, go-to guide to help design transformative bicycle/pedestrian projects. Organized by topic, the guide provides summaries and links to the most current state and national guidance about different aspects of pedestrian and bicycle design, including design flexibility, accessibility, separated bike facilities, road diets, and more.

Engineers across Ohio can use this new resource to develop safe, accessible, comfortable, and convenient active transportation

networks. Let us know how you've used the guide to make your communities more walkable and bikable!
